Washington, D.C. 20201

Dear Colleague:

I am pleased to provide you with a summary of information on mammography services provided by the Medicare program during 1994 and 1995. This book is part of the Health Care Financing Administration's (HCFA's) effort to educate the public and the health care community about mammography services covered by Medicare and to encourage women to use these services to improve their health. The data can also be obtained from HCFA's Internet home page at the following address:  
[www.hcfa.gov/stats/mamm/mammover.htm](http://www.hcfa.gov/stats/mamm/mammover.htm).

There are three notable findings about the utilization of Medicare-covered mammography services. First, only 39 percent of women aged 65 or older received mammograms during 1994 and 1995. Second, women of African-American descent had even lower utilization rates than Caucasian women. Third, use of mammography decreases substantially with age. I am hopeful that the dissemination of the data and the public discussion of its implications will encourage efforts to improve access and utilization of these services.

The utilization data reflect only those mammography services provided to Medicare beneficiaries in the fee-for-service setting for which Medicare received a bill. Breast cancer screening programs that do not generate a Medicare bill (such as those provided by health maintenance organizations (HMOs)) are not included in the data. The technical notes in the report provide additional details about the data and its limitations.

I would like to express my appreciation to the many individuals at HCFA and our Public Health Service colleagues, particularly in the National Cancer Institute, the Office of Women's Health, and the Centers for Disease Control and Prevention, who worked to develop this material. Credit also goes to our partners in the private sector who are assisting with the distribution of this information and organizing mammography campaigns nationwide.

The Department of Health and Human Services' "Healthy People 2000" goal is to have 60 percent of women aged 50 and older receive mammograms every 2 years. It is clear that, even with the addition of mammograms not billed to Medicare, the current

Page 2

mammography utilization rate of American women over age 65 is too low. With your help, I hope to distribute markedly improved findings in the future as we continue to monitor and encourage the use of this important Medicare-covered preventive service.

Sincerely,

A handwritten signature in black ink, appearing to read "Bruce C. Vladeck". The signature is fluid and cursive, with a long horizontal stroke at the end.

Bruce C. Vladeck  
Administrator

# **Mammography Services Paid by Medicare: 1994-95**

## **Rationale and Summary**

### **Key Findings**

Older women face a greater risk of developing breast cancer than younger women. Yet older women do not take full advantage of the life-saving potential of mammograms to detect breast cancer early, when it may be cured. The Department of Health and Human Services (DHHS) goal for the Year 2000 is for at least 60 percent of all older women to receive a mammogram and a clinical breast exam every two years.

During the 1994 - 1995 period, no State had reached the Year 2000 goal of 60 percent. Biennial rates of mammography services by State ranged from 32.2 to 48.4 percent. On average, Caucasians had higher biennial rates (range: 34.0 to 49.0 percent) than African Americans (range: 20.2 to 45.3 percent). However, most rates did increase slightly, between 1 and 4 percentage points, from the prior 1992-1993 reporting period.

When applied to the approximately 19.5 million elderly Medicare women who receive services in the fee-for-service sector, these percentages imply over 11.5 million elderly women have not received a mammogram in the past 2 years. When translated by race, these data imply approximately 10 million Caucasian women and 1.2 million African American women did not receive this important Medicare-covered service.

### **HCFA Data...**

- Reflect the most current biennial data on total mammography use by Medicare women aged 65 and older who are enrolled in the Part A and Part B programs.
- Are based on all mammography claims submitted by providers under Medicare Part B.
- Include Caucasians, African Americans, members of all other racial groups, and persons of unknown race in the category "all".
- Exclude approximately 9 percent of elderly women enrolled in managed care settings, such as health maintenance organizations (HMOs). Managed care settings do not submit claims for individual services.

## **What HCFA Mammography Data Represent**

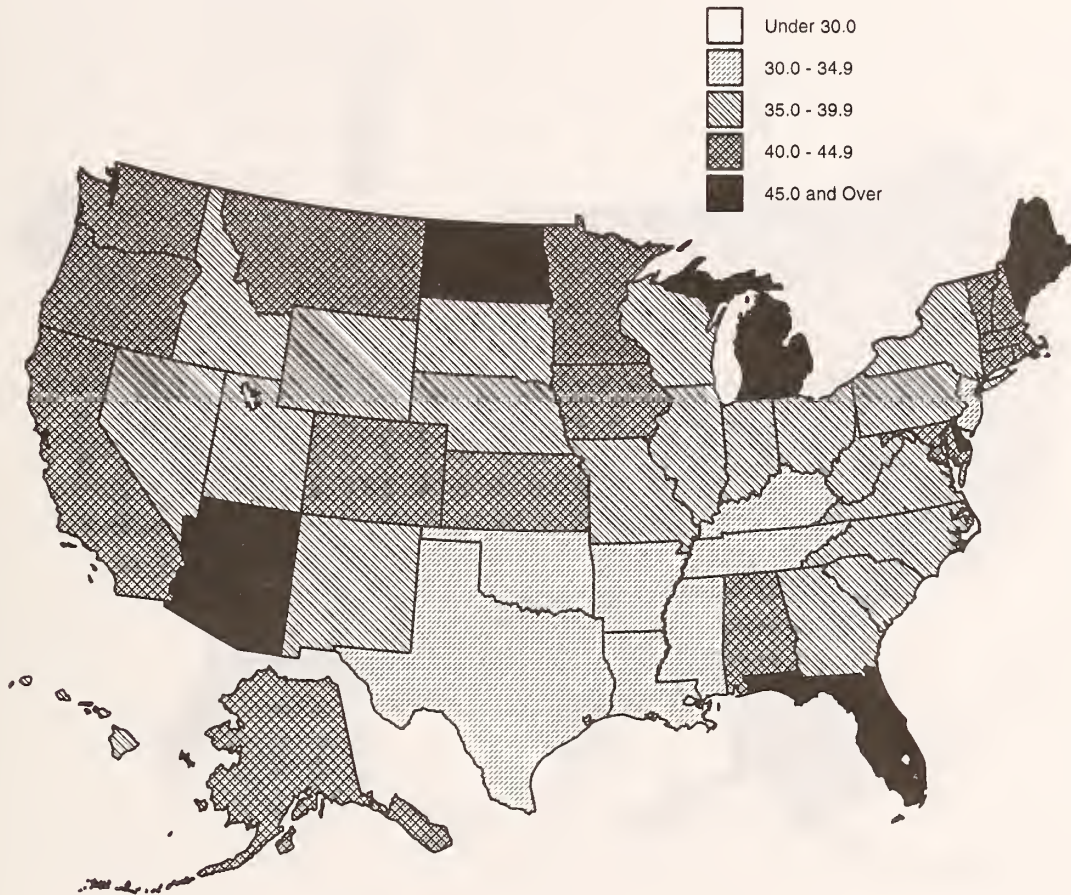

The mammography rates reported in this data book include the two types of mammograms, those that were done preventively (screening type) and those that were done because the woman had suspicious signs or symptoms of breast cancer (diagnostic type). Both types are included because the codes used to bill Medicare for mammograms are not used uniformly by all providers. Because of this variation, Medicare claims cannot reliably distinguish screening and diagnostic mammograms.

Medicare claims miss some elderly women who have had mammograms. Women who receive care in managed care settings (like HMOs), or who otherwise obtain an unbilled or free mammogram cannot be counted via Medicare claims. Free or unbilled mammograms may be provided by public and private programs administered in hospitals, clinics, mobile vans, or local organizations such as the YWCA.

## **HCFA National Medicare Mammography Campaign**

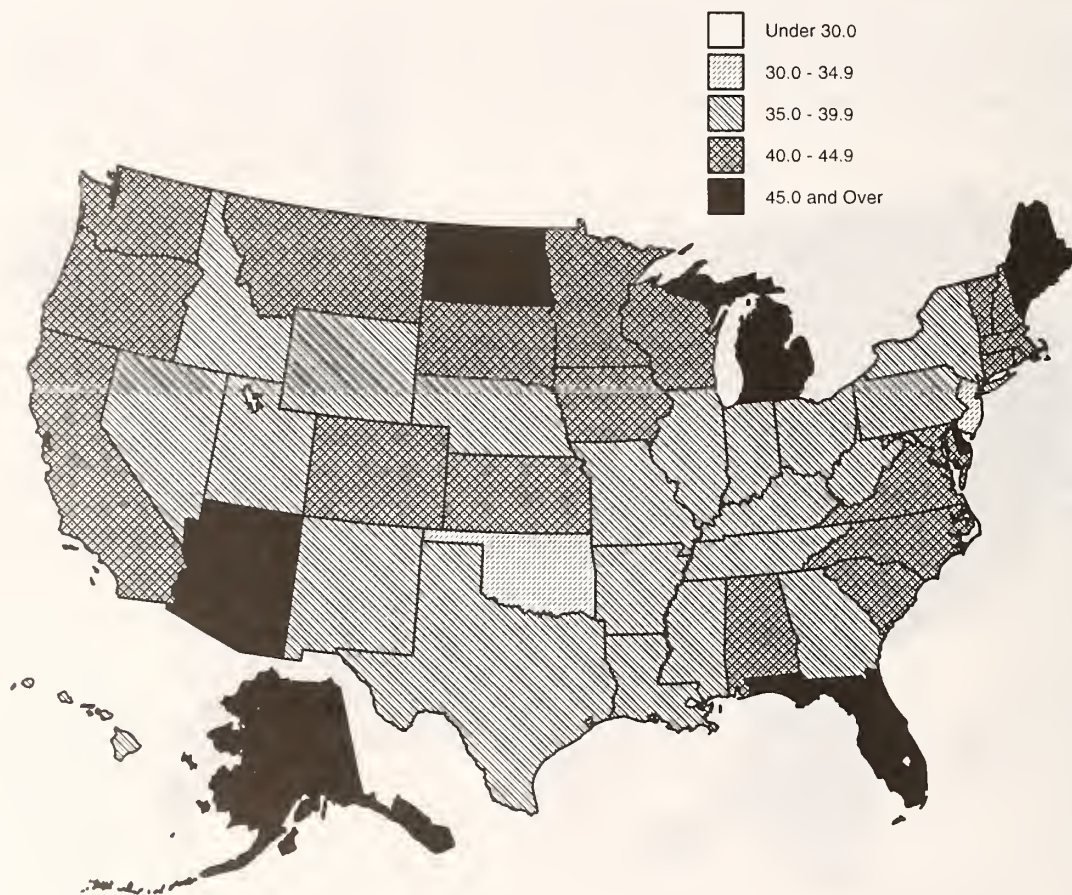

HCFA has developed a plan to provide a framework for guiding the mammography campaign through the year 2000. The overall goal of the mammography campaign is to increase the number of female Medicare beneficiaries age 65 and older who receive a Medicare-paid mammogram at least once every two years. HCFA intends to accomplish this goal in a way that assures equity among the various diverse populations served by the Medicare program. Therefore, the campaign will specifically target African-American and Hispanic elderly women and aim to achieve at least a utilization rate of 60 percent by the year 2000.

85 and Over	11.7	153,160	6.5	154,276

(1) Rates based on a specially constructed cohort explained in technical notes.

Data for Puerto Rico were excluded from the national totals.

(2) Includes persons of other and unknown race in addition to Caucasian and African American.

(3) Rates are not necessarily representative of the U.S. population age 50 - 64 because Medicare eligibility for this age group is limited to disabled persons or persons with end stage renal disease.

## **Technical Notes**

### **Explanation of Mammography Rates**

The mammography rates reported in this data book are based on analyses of 100 percent of Medicare claims. The rates were developed using methods and assumptions which might affect comparison to other reports of mammography utilization. Details are described below.

#### **Sources of Data**

The data were derived from enrollment and claims files maintained by the Health Care Financing Administration. The enrollment file consists of a record for each Medicare enrollee with dates of enrollment, age, gender, and place of residence. The claims file consists of a record for each claim paid by Medicare, and includes the enrollee identification number, type of procedure, date of service, and allowed charges.

#### **Methods Used in Calculating Rates**

This book reports annual and biennial rates of mammography utilization by Medicare women. Two time periods are covered: January 1, 1994 through December 31, 1995 (Biennial rate of mammography) and January 1, 1995 through December 31, 1995 (Annual rate of mammography). The rates are percentages of women who received at least one mammography service.

The denominator for the rate calculation consisted of a specialized longitudinal cohort of women. For the annual rate, the cohort was comprised of women continuously enrolled in Part A and Part B of Medicare for a full 12 month time period beginning January 1, 1995. For the biennial rate, the cohort consisted of all women continuously enrolled in Part A and Part B of Medicare for a full 24 month time period beginning January 1, 1994.

Each cohort thus excluded:

- A. Women who did not have Part A and Part B coverage for the entire time period.
- B. Women who were ineligible for Medicare on the basis of age as of January 1, 1994 for the biennial cohort, and January 1, 1995 for the annual cohort.
- C. Women enrolled in a health maintenance organization (HMO) for any period within the time frame.
- D. Women who died during the time period.

The biennial denominator was smaller than the annual denominator because women were excluded for reasons A-D for an additional 12 months.

Women in groups A-D also were excluded from the numerator of the annual and biennial rates. The numerator of the rates was the unduplicated count of Medicare women in the specialized cohort who had one or more allowed charges under Medicare for mammography services during the time period. Whether a woman had a screening mammogram, a diagnostic mammogram, or some combination of the two, she was counted only once in the numerator. Women without any Medicare bills for mammography were not counted.

Medicare bills for mammograms could be absent if a mammogram was obtained free, in an HMO, or was completely paid by insurance other than Medicare. Mammograms received by women dually enrolled in Medicare and Medicaid were counted, since these services are billed to Medicare as the first payer.

The cohort included women typically missed by national telephone and interview surveys, including those living in institutionalized settings such as nursing homes, those women without telephones, and those with speech, hearing, and cognitive disabilities.

### **Comparability of HCFA Rates to Survey Rates**

Surveys such as the National Health Interview Survey (NHIS) or the Behavioral Risk Factor Surveillance System (BRFSS) may report higher rates of mammography than those reported via Medicare claims.

In general, Medicare claims rates tend to under-report mammography utilization because they do not fully capture all mammography services or the women with the highest utilization rates, such as those women enrolled in Medicare managed care settings.

Surveys may over-report mammography utilization if they miss the poorest and sickest women with the lowest rates of mammography use. For example, a telephone survey like the BRFSS will not reach women without telephones, while a household survey like the NHIS will exclude those women living in institutionalized settings. Moreover, surveys may encounter recall problems as women tend to forget exactly how long it has been since their last mammogram.

Most probably, the "true" rate of mammography utilization lies somewhere between the Medicare claims rates and survey numbers.

## MEDICARE COVERAGE OF MAMMOGRAMS

### Screening Mammograms:

Since January 1, 1991, Medicare has covered mammography screening for the early detection of breast cancer. *Screening mammograms*, together with a physician's interpretation of the results, are covered by Medicare. The following table describes the conditions under which Medicare will pay for screening mammograms.

AGE	MEDICARE COVERAGE FOR SCREENING MAMMOGRAMS
Under 35	No Coverage
35 to under 40	Only One Screening Mammogram
40 to under 50*	One Annual Screening Mammogram
40 to under 50	One Screening Mammogram Every 2 Years
50 to under 65	One Annual Screening Mammogram
65 and above	One Screening Mammogram Every 2 Years

\*Women with a high risk of developing breast cancer (for example, a woman with a mother, sister or daughter who has had breast cancer).

Medicare also covers *diagnostic mammograms* when the patient shows signs or symptoms of breast disease, or a personal history of breast cancer, or a personal history of biopsy-proven benign breast disease. Medicare will cover these diagnostic mammograms for Medicare beneficiaries when the patient's physician has a specific reason for ordering the test, no matter what the age of the patient.

### Quality Standards:

The Mammography Quality Standards Act (MQSA) of 1992 went into effect on October 1, 1994, requiring all mammography facilities seeking Medicare payment for mammography screening to meet quality standards defined by regulations of the Food and Drug Administration (FDA). To lawfully perform either screening or diagnostic mammography under MQSA, facilities must obtain a certificate from the FDA by meeting quality standards for personnel, equipment, quality assurance and record keeping.

To retain the certificate, a facility must successfully complete an annual inspection by an MQSA inspector trained by the FDA. HCFA has ceased performing inspections. Instead, HCFA has agreed to accept FDA's certification as evidence that the facility is qualified for Medicare reimbursement, thereby minimizing duplication of inspections.
